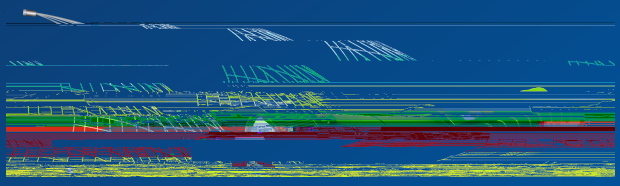
Electromagnetic Net-Capturing Device

Independently researched and developed by Nexwise Intelligence, it generates an instant thrust to open the capture net rapidly. In case of a target ahead, it twines the target automatically under a traction to restrain and capture the moving target securely within a close range (10m).



The product can be widely applied to security protection of schools, hospitals, parks, stations, financial institutions, energy facilities and government offices as well as assisting public security organizations in capture and emergency response.

FEATURES & SEPCIFICATIONS

- **Electromagnetic Launch Technology:** No high-pressure gas cylinders or gunpowder required; no consumable parts, allowing repeated use;
- **Ultra-High Molecular Weight Polyethylene Net:** Designed to restrain hazardous targets without causing harm to individuals;
- **User-Friendly & Portable:** Simple operation, easy to carry, and suitable for various security and arrest scenarios;
- **Durable & Reliable:** Net line breaking strength exceeds 130N;
- **Battery-Powered Operation:** Single charge supports 50 consecutive launches;
- **Quick Reload & Reusable:** Nets can be rapidly replaced and reused, or deployed as disposable units.
